

## ZINOCAR Sanding Booth

The ZINOCAR series of sanding booths has been designed according to versatility, modularity and efficiency criteria and are bolted to one another and constructed with galvanized steel panels, which can be painted upon request.

A vacuum is created via the soundproofed centrifugal fan mounted on the roof of the cabin; this forces the air to circulate driving the dust through cartridge filters which filter down to 1.5 microns. After being cleaned, the air is returned to the work area by centrifugal fan.

Complete with factory provided electrical panel, including programmable timer, connection, and electromagnetic switches for the pulse jet cleaning only.
