FRAVOL COMPLETE LINE OF EDGE BANDERS IN NORTH AMERICA

Fraval s.r.l., located in Peraga Di Vigonza, Italy, just outside Venice, is one of the most successful manufacturers of edge processing machines in the world. They built their first glue-based edge machine in 1963, which they believe was the first automatic edgebanding machine ever offered. Since then they have expanded their offering to include virtually any equipment you might want for edge processing of panels.

Currently holding 13 world-patented designs, Fraval offers a complete line of high-quality, innovative edgebanding machines. In addition to their automatic, single-side edge processing machines for both straight and curved applications, they offer a wide selection of options designed for small to large shops. Fraval edge banders are heavy-duty machines engineered to perform in the most hostile environments. They can process thin tape, 3mm PVC, HPL, aluminum and solid wood strips up to 16mm thick, perfectly suited for all edge processing applications. Fraval also offers semiautomatic edgebanders and trimming machines for edging round or curved parts. Custom machines can be ordered to meet exact requirements for manufacturing.

Master M200-23 Edgebander

VSB Edgebander

To learn more about Fraval's complete line of edgebanders, call Atlantic Machinery Corporation, Fraval's exclusive importer and distributor in North America, at 860-354-7200 or go to www.fraval.it. Videos can be viewed by [clicking on this link](#).
